

YOU WANT

- To improve and automate the data entry of driver logbook information

YOU NEED TO

- Check if the drivers follow the driving and off-duty time regulations
- Check if the driver daily log is made according to Canadian and American laws

AN APPLICATION DOES IT FOR YOU: THE MILLO CHECK^(TM)

- Calculates and sum up the driving, off-duty, on-duty and sleeper berth hours.
- Indicates violations and failures according to the current laws.
- Checks the average speed and indicates a failure if it exceeds your company's regulation.
- Notes the input of events (fuel, customs, scale).
- Checks if the event matches the driver's activity (e.g. : a fuel event needs an on-duty activity).
- Generates summary reports of on-duty hours and available hours for the next days.
- Generates driver notification letters according to their violations and/or failures.
- Generates driver congratulation letters.
- Enables import of data from other systems.

With the Millo-Check^(TM) Scan version your work is even more improved!

It detects automatically more than 20 features as:

- Starting and ending odometers and the driven miles
- Signature missing
- Country's line missing
- Total of hours missing at the end of each line
- Inconsistency between the graph hours and the total hours on the daily log
- Recognition of log off
- And much more ...

Try the Millo-Check^(TM) for **free!**
